

Field Application Specialist

Bring your microscopy expertise to **semiconductor challenges** worldwide.

Brno, Czech Republic · Semiconductor industry · Full-time

NenoVision is a **deep-tech company** from Brno. We develop **LiteScope™**, an AFM integrated directly into a scanning electron microscope, and sell it worldwide, increasingly to the **semiconductor industry**.

What you will do

- **Customer sample measurements:** design the approach, measure independently and present interpreted results.
- **Demonstrate value:** run discovery calls, demos and pilots with sales and turn results into a clear next step.
- **Installation and training:** install and verify systems on site, train users and get them working independently.
- **Conferences and workshops:** represent NenoVision with product demonstrations and technical talks.
- **Troubleshooting and support:** diagnose application problems remotely and on site with the application team.
- **Spot opportunities:** notice new customer needs and use cases and pass them to sales.

What you bring

- Strong hands-on experience in SEM or AFM. We'll help you learn the other. Semiconductor experience is welcome, not required.
- You interpret the data, not just run the instrument, and can explain it to researchers and managers alike.
- Customer-facing experience or a strong aptitude for it, and clear writing for application notes and technical reports.
- English at B2 minimum, ideally C1, for customer meetings, training and technical presentations.
- Ready to travel: 50%+ of your time in Europe, the USA and Asia, including week-long trips. Driving licence (B).
- Typically a degree in physics, materials engineering, nanotechnology or a related field.

Why join NenoVision?

Work on cutting-edge technology

Work with leading semiconductor companies on next-generation chips using LiteScope™.

Be part of something ambitious

Our ambition: become the global leader in AFM-in-SEM technology and push the limits of nanoscale analysis.

Make an impact. Grow with us.

Own customer projects, influence decisions and grow towards an Applications Team Lead role.

Build real customer relationships

Work directly with engineers and scientists on real challenges, building long-term partnerships.

Small team. Big responsibility.

Less bureaucracy, more openness, trust and initiative. You decide, challenge and shape how we work.

Travel worldwide. With flexibility.

Travel to world-class labs and combine business trips with personal travel when possible.
